SNAPSHOTS OF SOLUTION-MAKERS:

JAMES HALL: WHAT I DO

An Interview with ExxonMobil

Over the past few years, we've tested dozens of different technologies from different platforms (satellites, aerial, ring-fenced, and handheld) to see which ones could really allow us to survey a large amount of sites in a reasonable amount of time, cost effectively and accurately. The amount of sites we have in the Permian Basin are immense, close to a thousand or so.

The reality is we need to test and use the [best technologies](#) here in the Permian Basin so that we can roll out these technologies to locations around the world and manage our operations responsibly.
