# SNAPSHOTS OF SOLUTION-MAKERS:

## **MONTE DOBSON: WHY IT MATTERS**

### **An Interview with ExxonMobil**

The technologies that we're developing, particularly aerial detection, have the potential to establish a universal industry standard that's stronger than what's currently mandated by the government.

One of the more exciting parts of this role is, the work that we're doing in methane is for the benefit of the entire industry and for society overall. We're collaborating with other operators, with NGOs, with the best minds in academia and great minds in my own team, all focused, singularly, on allowing [methane detection](#) to happen quickly and leaks to be fixed very timely.

We're going above and beyond to find and cut methane emissions.
